- The above calculation is based @ 22c/kwatt/hr.
- We have assumed that the heating is 'ON' for 6 hours a day (3 hours in the morning and 3 hours at night).
- Cost per month has been calculated @ 31 days per month
- Every 1°C reduction in the temperature setting of your thermostat will result in a 5% – 8% reduction in power usage and cost over 24 hours.
- The calculation of running costs can only be approximate. The actual cost will depend on a number of considerations – user preferences, temperature and switch-on time setpoints, cost of energy etc.
