

INSULATION BOARDS by

40% of underfloor heating gets lost through concrete floors.

No underfloor heating is complete or effective without proper insulation to assist with both the waterproofing requirements as well as directing the heat flow. This ultimately makes a big difference in reducing your power bill. We trust Marmox insulation boards to do just that.

After switching on your heating, your floor tiles will warm up in about 15-20 minutes, even on a cold concrete floor. On a wooden floor, it has a 2° increase every 10 minutes from start up.

The benefits of using Marmox in your home
Heating on/off

Features:

- Energy saving/ energy efficient
- Acts as a thermal barrier and significantly reduces heat loss to the substrate
- Easy to work with and install into new and existing building projects
- Removes the need for tile and slate underlay, provided that the sub-floor is structurally sound and flat
- Completely water-resistant and will not absorb moisture, making it ideal for bathrooms and wetrooms
- Acts as an excellent acoustic barrier when used upstairs
- Reduces footfall noise on concrete floors

Code	Weight (kg/board)	Density (kg/m)	Thickness of the foam(m)	R value (m.K/W)	Thermal transmittance (W/m² x K) 100°C ambient temp diff	Number of boards per box
CB6	2.0	445	0.005	0.16	3.19	8 (6sqm)
CB10	2.2	290	0.009	0.28	2.33	6 (4.5sqm)
CB20	2.5	170	0.019	0.59	1.40	5 (3.75sqm)

Insulation boards of thicknesses 30mm and 50mm are also available but have longer lead times.
